IN THE MATTER OF THE
APPLICATION OF PUBLIC SERVICE COMPANY OF COLORADO FOR
APPROVAL OF ITS 2022-2025 RENEWABLE ENERGY COMPLIANCE PLAN

PROCEEDING NO. 21A-0625EG

CROSS ANSWER TESTIMONY
OF MICHAEL N. KRUGER

ON BEHALF OF
COLORADO SOLAR AND STORAGE ASSOCIATION
AND
SOLAR ENERGY INDUSTRIES ASSOCIATION

August 12, 2022

I. Introduction and Qualifications

Q1. PLEASE STATE FOR THE RECORD YOUR NAME, POSITION, AND BUSINESS ADDRESS.

A1. My name is Michael Kruger. I am the President and CEO of the Colorado Solar and Storage Association (“COSSA”). My business address is 1536 Wynkoop St, Suite 104, Denver, CO, 80202.

Q2. ARE YOU THE SAME MICHAEL KRUGER THAT SUBMITTED ANSWER TESTIMONY IN THIS PROCEEDING?

A2. Yes.

Q3. ON WHOSE BEHALF ARE YOU SUBMITTING TESTIMONY?

A3. My testimony is provided on behalf of Intervenors, the Colorado Solar and Storage Association and the Solar Electric Industries Association (“SEIA”).

Q4. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A4. The purpose of my testimony is to review and comment on the various answer testimonies that parties submitted regarding the community solar programs in Public Service Company of Colorado’s (“Public Service” or “the Company”) 2022-2025 Renewable Energy Compliance Plan (“RE Plan” or “Plan”).

Q5. HOW IS YOUR TESTIMONY ORGANIZED?

A5. I begin by addressing issues other intervenors brought up that I discussed in my answer testimony. I then turn to issues brought up by other intervenors that I did not directly address in my answer testimony.
Q6. DOES YOUR FAILURE TO RESPOND TO A PARTICULAR INTERVENOR’S ANSWER TESTIMONY INDICATE SUPPORT FOR THAT PARTY’S POSITIONS?

A6. No. I do not respond to all points raised by all intervenors, and the absence of a response does not imply adoption or support of those positions.

II. Cross Answer Testimony on Issues Discussed in Kruger Answer

Testimony

A. Intervenors’ Positions on Public Service-Owned Income-Qualified Community Solar Gardens

Q9. PLEASE PROVIDE A BRIEF SUMMARY OF COSSA/SEIA’S RECOMMENDATIONS FOR PUBLIC SERVICE’S PROPOSED OWNERSHIP OF INCOME-QUALIFIED (“IQ”) COMMUNITY SOLAR GARDENS (“CSGs”).

A9. COSSA/SEIA urged the Commission to reject the Company’s proposal to expand Company-owned IQ gardens and instead instruct the Company to pursue build-own-transfer partnerships with the solar industry.

Q10. DID ANY OTHER INTERVENORS DISCUSS PUBLIC SERVICE’S PROPOSED OWNERSHIP OF INCOME-QUALIFIED COMMUNITY SOLAR GARDENS?

A10. Yes. The City of Boulder, through Carolyn Elam’s testimony, discussed this proposal at length. Ms. Elam suggested that “Public Service be prohibited from
owning these new income-qualified CSGs due to the poor performance of the previous CSGs owned by the Company.

Q11. DO YOU AGREE WITH HER ASSESSMENT?
A11. Yes. Ms. Elam has done a wonderful assessment of the failures of the gardens in providing benefits to income-qualified subscribers. She notes that production at the Valmont CSG on June 1, 2022 was only 50% of the production reported on June 1, 2021. She contrasts that with five gardens that are owned and operated by third parties and that have shown far superior performance.

Q12. MS. ELAM SUGGESTS THAT INSTEAD OF PUBLIC SERVICE OWNING ANY GARDENS, THAT THE COMMISSION ADD A MINIMUM OF 40 MEGAWATTS OF INCOME-QUALIFIED GARDENS. DO YOU SUPPORT THAT PROPOSAL?
A12. I do not. I worry that the cost for 40 megawatts of projects fully dedicated to IQ subscribers might strain the “renewable energy standard adjustment” (“RESA”) and therefore require reducing or eliminating other important programs also supported by the RESA. In my answer testimony, I suggested that each garden include 10% of IQ subscribers and that the Commission set a total budget for incentives to encourage the participation of additional IQ subscribers.

Q13. DID ANY OTHER INTERVENOR DISCUSS PUBLIC SERVICE’S PROPOSED OWNERSHIP OF INCOME-QUALIFIED COMMUNITY SOLAR GARDENS?
A13. Yes. William Dalton, on behalf of the Staff of the Colorado Public Utilities Commission, proposed allowing Public Service rate-base its Company-owned IQ

---

1 Hearing Exhibit 501, Answer Testimony of Carolyn Elam, at 6.
2 Id. at 7.
CSGs and earn additional incentives through performance incentive metrics (“PIMs”) on these Company-owned IQ CSGs.3

Q14. WHAT IS YOUR RESPONSE TO STAFF’S PROPOSAL?

A14. As I demonstrated in my answer testimony, industry can build and operate these projects more effectively than the Company and at a lower incentive. While I am not an attorney and offer no opinion on whether rate basing the cost of these projects is consistent with the law, to the extent the Commission chooses to do so, it should require Public Service to rate base the costs of the build-own-transfer partnership proposed in my answer testimony for Company-owned IQ CSGs.

B. Intervenors’ Positions on Improving the IQ Subscriber Experience

Q13. CAN YOU BRIEFLY DESCRIBE COSSA/SEIA’S RECOMMENDATIONS REGARDING IMPROVING THE IQ SUBSCRIBER EXPERIENCE?

A13. COSSA/SEIA did not make a specific recommendation regarding IQ subscribers, but we did address consolidated billing in my answer testimony. We did note on several occasions the value to the customer in simplifying the billing process, especially the IQ community. If Public Service was to offer consolidated billing for third-party subscribers, it should increase customer savings and potentially allow the commission to have a much better insight into the savings IQ customers are receiving.

---

3 Hearing Exhibit 400, Answer Testimony of Staff Witness Willian J. Dalton, at 39-44.
Q14. **DID ANY OTHER INTERVENORS DISCUSS CONSOLIDATED BILLING IN THEIR ANSWER TESTIMONY?**

A14. Yes. The City and County of Denver in Jonathan Rogers’ testimony states,

> “providing this guarantee would be significantly easier to manage if the Company offered consolidated billing services for privately operated CSGs in the same fashion that it does through the Company-owned IQ gardens. Both as a customer and a developer, Denver would appreciate having the option available to procure services from the Company to consolidate billing for CSG subscriptions through the Company's billing management system.”

COSSA/SEIA agree with this position and believe that all would benefit through a consolidated billing offering from the Company for IQ customers.

Q15. **DO INTERVENORS SUGGEST OTHER WAYS TO IMPROVE THE IQ CUSTOMER EXPERIENCE AND TO REMOVE BARRIERS TO ENTRY?**

A15. Yes. Ms. Shield’s offers multiple suggestions like the elimination of the Subscriber Agency Agreement and Energy Outreach Colorado retaining data consent forms. She notes that it can take up to two months to get an IQ subscriber enrolled due to these paperwork requirements. COSSA/SEIA suggest that every effort should be made to streamline the process for IQ subscribers, including adopting the recommendations in Ms. Shield’s answer testimony.

---

4 Hearing Exhibit 600, Answer Testimony of Jonathan Rogers, at 17.
5 Hearing Exhibit 701, Answer Testimony of Kim Shields, at 11.
6 Id. at 13.
C. Intervenors’ Positions on Community Solar Garden Capacity

Q16. CAN YOU BRIEFLY DESCRIBE COSSA/SEIA’S RECOMMENDATIONS FOR TOTAL CAPACITY AVAILABLE IN THIS RE PLAN?

A16. COSSA/SEIA recommend that the Commission set the total capacity as a minimum of 1% of annual retail electric sales (~150 MWac) for each of the four years of the Plan, with a maximum of 1.5% of annual retail electric sales (~220 MWac) for each of the four years of the Plan. We also recommend that 90% of that be offered via a standard offer upon approval of the plan. The remaining 10% should be offered via a request for proposals (“RFP”) 12 months prior to the conclusion of the approved RE plan.

Q17. DID ANY OTHER INTERVENORS DISCUSS TOTAL CAPACITY ALLOCATIONS IN THEIR ANSWER TESTIMONY?

A17. Many of the intervenors discussed the total capacity and several suggested adopting the capacity amounts offered by Public Service. However, the Utilities Consumer Advocate suggested that the “Company use the 35MW to 75MW range in its bid proposals as a measure of prudence…As a result, the RFP should clearly allow bidders to bid within a range of CSG capacity, which may be lower than the 75 MW amount.”

Q18. WHAT IS YOUR REACTION TO THIS PROPOSAL?

A18. I’m not sure how this would work. For example, would the Company get to decide what is prudent? In the 2020-2021 RES plan, Public Service felt that the 2021

---

7 Hearing Exhibit 200, Answer Testimony of Chris Neil, at 8.
bids were not prudent and filed a motion to rebid. However, the Commission disagreed and ordered the RFP bids to be awarded per the original RFP scoring criteria. I don’t have any confidence the same thing wouldn’t happen year over year.

Moreover, it is not appropriate for Public Service, or any other party to this proceeding to decide what amount of CSG capacity is or isn't prudent. That is a decision that lies solely with the Commissioners.

Mr. Neil’s concern about the pricing is legitimate. Even with the promise of an extended ITC under the Inflation Reduction Act, the costs within the solar industry have risen and show limited signs of abating during the term of this RE plan. However, the solution is to not lean further into the RFP where the outcomes are unknown and the costs uncertain. The Commission would be better served by setting a clear standard offer for the vast majority of the capacity. This would ensure fiscal certainty for the RESA, ratepayers and the community solar developers.

D. Intervenors’ Positions on Cost of Community Solar Gardens

Q19. BRIEFLY DESCRIBE COSSA/SEIA’S PROPOSAL REGARDING COMMUNITY SOLAR COSTS AND HOW THEY RELATE TO LARGE-SCALE SOLAR DEVELOPMENT

A19. In my Answer testimony, I noted that “the Commission should recognize that Community Solar Gardens are not small utility-scale projects. By statute they are
to be considered onsite generation and serve a fundamentally different purpose, with public policy goals that are not asked of utility-scale projects.”

Q20. DID ANY OTHER INTERVENORS DISCUSS COMMUNITY SOLAR COSTS IN THEIR ANSWER TESTIMONY?

A20. Yes. Mr. Neil discussed the issue of cost at length in his testimony. He asserts that the “cost of CSG should be only reasonably more than alternatives like utility-scale solar” and uses a single example of a 200 MW project located in Pueblo County as his data point. That single project has a bid price of $19.50/MWh. He then contrasts that with his calculation that CSG costs over $117/MWh per the RFP and $137.18/MWh per the Standard Offer in 2021. While Mr. Neil does not put forth proposals in his answer testimony about what he’d like done, he does imply that the Public Service proposal for adders on the standard offer are too high.

Q21. DO YOU AGREE WITH MR. NEIL’S ANALYSIS?

A21. No, I do not. Mr. Neil adds in the subscriber bill credit as a cost, in addition to the RFP bid price. Since CSGs are deemed in statute as being onsite, the only reasonable comparison is to onsite net metering and not to large-scale solar solicitations. On this specific analysis, Mr. Neil has selected the 2021 CSG solicitation, which was an outlier from previous RFP responses due to the highly incentivized nature of the selection criteria. Solar developers were awarded

9 Hearing Exhibit 200, Answer Testimony of Chris Neil, at 11-12.
10 Id. at 12.
maximum points if they donated the entire subscription to IQ subscribers. That removed one revenue stream normally available to a solar developer to lower overall costs. Finally, Mr. Neil only provides the gross cost. If he were looking for a net cost, that subtracted the avoided cost value ($64.49/MWh in 2021), the overall cost would have been much lower. Mr. Lucas goes into more detail on the Company’s avoided cost rates in his testimony.¹¹

Additionally, Mr. Neil treats the large-scale solar installation from a 2017 solicitation as analogous to one from 2021. Many things have changed in the world and solar industry in those intervening years, including increased panel, labor, financing, and interconnection costs.

Finally, CSGs are just fundamentally different solar products. Large-scale installations have a single off-taker, require limited administrative burden after the project is completed, don’t require sales and marketing teams, don’t have to adhere to Commission rules regarding off-takers or provide immediate bill savings.

While Mr. Neil’s exercise is interesting, it only highlights the need to have both solar products available in the market as each is better suited for different policy outcomes.

¹¹ Hearing Exhibit 900, Answer Testimony of Kevin M. Lucas, Rev. 2, at 33-35.
E. **Staff’s Positions on REC treatment for Community Solar Gardens**

Q22. **CAN YOU BRIEFLY DESCRIBE COSSA/SEIA’S RECOMMENDATION FOR HOW RENEWABLE ENERGY CREDITS (“RECs”) SHOULD BE TREATED?**

A22. Consistent with the rule that at least one standard offer must enable subscribers to keep their RECs, COSSA/SEIA stated that RECs should be available to subscribers and therefore it would likely be most efficient to assign them to the subscriber organization. If Public Service would like those RECs, they should purchase them from the subscriber organizations at a standard REC purchase price. In cases where developers bid on capacity (i.e. the RFP), Public Service purchases the RECs from the subscriber organization as part of the bid price. COSSA/SEIA also believes that negative RECs should be disallowed.

Q23. **DID ANY OTHER INTERVENORS DISCUSS THE TREATMENT OF RENEWABLE ENERGY CREDITS IN THEIR ANSWER TESTIMONY?**

A.23. Yes, Mr. Dalton, on behalf of the Staff of the Colorado Public Utilities Commission, says, “Staff recommends allowing CSG bidders to offer to pay a CSG Resource Fee with the fee collect [sic] upfront and treated as an upfront REC payment and deposited into the RESA account to provide additional funding for eligible energy resources.” According to Mr. Dalton this would “reinforce that CSGs are energy generation resources with energy compensation at subscribers’ bill credit rate, and not exclusively REC acquisition programs.”

---

12 Hearing Exhibit 400, Answer Testimony of Staff Witness William J. Dalton, at 55.
13 *Id.*
Q24. HOW DO YOU REACT TO THAT SUGGESTION?

A24. It is strange to me that the subscriber organization, if assigned by the subscriber, would pay anything to Public Service for the REC. Staff seems to suggest that this may be a solution should a developer wish to bid a negative REC, which Staff supports as a concept, in lieu of giving the REC to Public Service. However, the proposal for the fee to be “paid upfront based on expected generation provided over the twenty-year life of [sic] CSG contract”\textsuperscript{14} does not take into account the net present value of money and how much additional capital will be required for developers to provide a lump sum at the beginning of the producer agreement. This would further drive up costs for CSG developers and subscribers. I do not believe the Staff suggestion is workable and should be rejected.

III. Cross Answer Testimony on Issues Not Discussed in Kruger Answer

Testimony

A. City and County of Denver’s Recommendation on the Community Solar Garden Bill Credit

Q25. WHAT DOES THE CITY AND COUNTY OF DENVER IDENTIFY AS A PROBLEM WITH THE CURRENT CSG PROGRAM?

A25. Mr. Rogers notes that the “divergence of the value of the SRCS bill credit from the cost of a CSG subscription threatens the financial stability of the CSG

\textsuperscript{14} Id.
market.”\textsuperscript{15} He points out “a trend in which the percentage of customers rates associated with transmission, distribution, and DSM is increasing while the percentage of customer rates associated with energy are decreasing.”\textsuperscript{16} This is resulting in CSG subscriptions becoming a premium energy product, even as subscribers look to hedge their future energy costs.

**Q26. WHAT DOES MR. ROGERS’ SUGGEST TO STOP THIS EROSION OF VALUE?**

\textbf{A26.} Mr. Rogers suggests that the “SRCS Bill Credit could be fixed at the value in effect at the time the CSG subscription became active.”\textsuperscript{17} His reasoning is that “early adopters are not to be effectively punished for their subscriptions.”\textsuperscript{18}

**Q27. WHAT DO YOU THINK OF THIS PROPOSAL?**

\textbf{A27.} COSSA/SEIA supports this proposal. We have previously offered a similar solution to the erosion of the value of the bill credit for early adopters. Additionally, the annual change in the CSG bill credit makes it very difficult for CSG developers to adequately project their revenue. Given that they cannot predict their future revenue via the bill credit, they have to make up the value elsewhere, either via the subscription rate or a higher bid in the CSG RFP. In keeping with COSSA/SEIA’s effort to provide financial certainty through this four-year plan, we suggest Mr. Rogers’ proposal be adopted.

\textsuperscript{15} Hearing Exhibit 600, Answer Testimony of Jonathan Rogers, at 8.

\textsuperscript{17} Id. at 11.
\textsuperscript{18} Id.
1 Q28. DOES THIS CONCLUDE YOUR TESTIMONY?

2 A28. Yes, it does.
IN THE MATTER OF THE APPLICATION OF PUBLIC SERVICE COMPANY OF COLORADO FOR APPROVAL OF ITS 2022-2025 RENEWABLE ENERGY COMPLIANCE PLAN.

AFFIDAVIT OF MICHAEL N. KRUGER
ON BEHALF OF THE COLORADO SOLAR AND STORAGE ASSOCIATION AND THE SOLAR ENERGY INDUSTRIES ASSOCIATION

I, Michael N. Kruger, being duly sworn, state that the Cross Answer Testimony was prepared by me or under my supervision, control, and direction; that the Testimony and attachments are true and correct to the best of my information, knowledge, and belief; and that I would give the same testimony orally and would present the same attachments if asked under oath.

Signed in Denver, CO this 12th day of August 2022.

/s/ Michael N. Kruger
Michael N. Kruger
President and CEO
COSSA
CERTIFICATE OF SERVICE

I hereby certify that on this 12th day of August 2022, a copy of the foregoing Cross Answer Testimony of Michael N. Kruger on behalf of the Colorado Solar and Storage Association and the Solar Energy Industries Association was filed and served upon all participants in Proceeding No. 21A-0625EG through the Colorado Public Utilities Commission E-filing system.
