

## Commitment to Quality Solar Workforce Training

Solar energy in America is booming as the cost of solar technologies plummets. We are experiencing a fundamental shift in our energy use and production – and the need for a new generation of well-trained workers in solar energy.

To support this shift in a sustainable manner, IREC and SEIA offer this “Commitment to Quality Solar Workforce Training.” This commitment exemplifies the efforts of IREC and SEIA to build the foundation of a skilled, knowledgeable workforce trained to safely and effectively perform the tasks solar energy jobs require.

High-quality training is essential to develop a skilled solar workforce. Effective training under this commitment uses a curriculum and method that:

- Is tailored to the latest industry needs and based on industry best practices;
- Is taught by well-qualified instructors;
- Includes rigorous assessments and effective management administration;
- Is rooted in safe, ethical practices and supports the SEIA Code of Ethics; and
- Provides value to the worker, solar industry, and the end consumer.

By signing this commitment, you and your company publicly recognize the critical value quality workforce training brings to the solar energy industry and pledge to support and employ such training methods described above.
